Time Management

Problem Solving

Critical Thinking

ABOUT

I'm a 4th-year, 1st-semester student, Computer Science student at the Royal University of Phnom Penh. Although I do not yet have formal work experience, I have developed several Frontend and Backend projects during my studies and real experience with team work when I interned at ETEC Center. I have experience building backend web applications using PHP/Laravel and Node.js/Express.js. Skilled in RESTful APIs, JWT Authentication, and database management MySQL, PostgreSQL and Docker. Motivated to grow as a professional Web Developer.

PROJECT

- Experienced in backend development using PHP/Laravel and Node.js/Express.js.
- Bakong KHQR Payment System** – using Blade HTML, Bootstrap 5, JavaScript, Laravel, MySQL, Eloquent Model, RESTful APIs and Payment(Bakong KHQR API).
- Product Management System** – using React.js, Express.js and PostgreSQL database and implemented JWT authentication and authorization for secure access and use Cloudinary for image management.
- Google OAuth Authentication System** – Authentication system using React, Express.js, PostgreSQL, and Docker.
- Student Management System** – React.js, RESTful APIs using Express.js with authentication and PostgreSQL database integration.
- Pizza Shop** : using Blade, Bootstrap 5, PHP, MySQL, user authentication, and RESTful APIs.
- Library Management System** – React.js, Laravel and MySQL for managing books, members, borrowing, and return records.
- Product Shop** : A product dashboard that uses an AI chatbot to help users get information about products. The project uses React.js for the frontend, Laravel for the backend, PostgreSQL for the database, and Ollama for AI chat.
- Proficient in CRUD operations, middleware, and secure authentication & authorization.
- Completed both team-based and individual web development projects.
